SPECIFIC— Burial Packaging

Reference: 8 June 1955

25X1

1. Although you requested priority attention to the questions you presented this unit in reference dispatch, we will be unable for about three weeks to present an adequate appraisal. The present strength of the section concerned is one man, but upon the return of the project engineer, from leave, a detailed summary will be presented you. 25X1
2. In the meanwhile, however, it is suggested that you examine date 26 July 1954, wherein a detailed description of our entire setup was given. Paragraph 2 of the attachment thereto listed our contemplated plans for future expansion of the packaging facility. The plans were never carried out with the exception that we did purchase and install the electric hoist. Hence our setup is that as described in plus the electric hoist. 25X1
3. We did not further expand our facility because the Support 25X1 now has an extensive hot dip setup where most production work for this area is now accomplished. We assisted them to the extent of designing and purchasing for their account two Japanese tanks. Since this installation began operation our dipping operations have fallen off, and the only production work we do is all the material in Japan and some periodic work for , mainly ra 25X1. Therefore we probably are not doing burial packaging to the extent you believe.
4. The experimental program is continuing. A large test cache was buried last July. It is made up of six separate packages which are exhumed periodically. The completion of this particular phase of the program will be January 1956.
